datawazi_

[00] // capabilities

Data & AI, built to work_

datawazi designs, builds and runs the systems that help organisations work smarter.

[01] // sound familiar?

The data exists.
Straight answers don't.

reporting

Month-end takes five days of copy-paste.

trust

Three departments. Three versions of revenue.

ai

Everyone wants AI. Nobody knows for what.

Six things we build.
Sized to what you need.

01 / data platforms

A single source of truth, sized to your budget.

02 / pipelines & integrations

ERP, CRM, finance, HR, spreadsheets, APIs and files, connected.

03 / dashboards & analytics

Numbers people trust, reconciled to source.

04 / workflow automation

Reports, approvals and hand-offs without the manual work.

05 / custom tools

The internal tool your team keeps wishing for.

06 / AI integration

Assistants and AI features that answer from your own documents.

Start with clarity.
Finish with a team that runs it.

before · 1–2 weeks

Readiness audit

- systems & data review
- quick wins & risks
- a prioritised roadmap

alongside

AI adoption & training

- hands-on workshops
- team playbooks
- AI usage policy

after go-live

Managed support

- monitoring & fixes
- small changes
- monthly report

[04] // how we work

Five phases.
No surprises.

fit	discover	build	launch	run
Fit check call	Discovery & audit	Kickoff & access	Handover & training	Support
Intake questions	Proposal & SOW	Solution design	Hypercare	Next phase
		Weekly sprints & demos		
		Test & sign-off		

A demo every week · every number reconciled to your systems · docs and training at handover

What you get.
What we need from you.

What you get

- A clear scope and fixed deliverables before work starts
- Working software every week, shown in a demo
- Numbers reconciled against your source systems
- Documentation and training for your team
- 2–4 weeks of close support after go-live
- Everything built in your accounts, owned by you

What we need from you

- A sponsor who can make decisions quickly
- A day-to-day contact for questions
- Access to the systems in scope
- People to test before go-live

Five rules.
Every project.

01

Business first

Decisions before technology.

02

Practical

Working systems, not hype.

03

Handed over

Docs and training, always.

04

Vendor-neutral

What fits, not what sells.

05

PDPA-aware

Designed in from day one.

[07] // who we work with

Any organisation, any sector.

SMEs

“Our numbers live in twelve spreadsheets.”

Corporates

“Every department has its own revenue.”

Public sector & GLCs

“Board reporting takes three weeks.”

Non-profits

“Funders want impact data, fast.”

Education

“Enrolment and finance don't talk.”

Healthcare

“Patient data must stay protected.”

Startups

“AI in the product, not a science project.”

Not sure?

Tell us the problem. If it isn't for us, we'll say so.

We build.
You own it.

message 1

We build, not just advise

Strategy that ends in working systems, not a slide deck.

message 2

Sized to you

From an SME's first dashboard to a GLC data platform.

message 3

Your team can run it

Handover, docs and training are standard. No lock-in.

message 4

Safe with your data

PDPA-aware, read-only where possible, data kept where you need it.

[09] // ways to start

Three ways to start. Scoped after a fit check.

readiness audit

1–2 weeks

Not sure where to start, or the data is messy. Ends in a prioritised roadmap you keep.

focused build

typically 4–8 weeks

A clear problem: e.g. one pipeline and dashboard, or one automated workflow.

AI workshop

half or full day

Get your team using AI well and safely, with a usage policy everyone understands.

Ongoing support available after any build · pricing is scoped to each organisation

[--] // the name

datawazi_
Data made clear.

Swahili

wazi = clear, open

Take messy data and make it clear enough to decide with.

Malay

wazi ≈ wazir, a trusted adviser

The role we play for the organisations we work with.

datawazi_

[--] // start here

One problem.
Thirty minutes.
A clear next step.
