[00] // AI at work · workshop

Using AI well, and safely_

For {{CLIENT_NAME}}

{{DATE}} · half day · facilitated by datawazi

[01] // today

Three and a half hours. Mostly hands-on.

09:00	Welcome & goals
09:15	What AI is good at (and bad at)
09:40	Safe use: the traffic light
10:00	The 5-part brief
10:30	Break
10:45	Your turn: everyday tasks
11:20	Your turn: your role
11:55	Check before you send
12:10	Use cases & your policy
12:25	Commitments & close

[02] // by the end of today

Three things you will leave with.

use

Get real work done

Draft, summarise, rewrite and analyse with AI on tasks from your own job.

safe

Know what not to share

A simple rule for which information can go into which AI tool.

check

Trust, but verify

A short checklist so nothing goes out wrong under your name.

[03] // what it is

What AI is good at.
And what it isn't.

A fast, tireless assistant. Not an expert.

Good at

- First drafts: emails, reports, proposals
- Summarising long documents and meetings
- Rewriting: shorter, clearer, another tone
- Translating, e.g. English ↔ Bahasa Melayu
- Ideas, outlines and checklists
- Explaining formulas, code and jargon

Bad at

- Facts it wasn't given (it guesses, confidently)
- Exact numbers and calculations
- Recent events and your internal knowledge
- Knowing your context unless you tell it
- Judgement, accountability, final decisions
- Keeping secrets you paste into the wrong tool

[03] // how it works, in one line

It predicts.
It doesn't know.

in

Your brief

Your instructions, context and any material you paste in.

model

Predicts the next words

Trained on huge amounts of text. Fluent, fast, often right.

out

Confident text

Sounds certain either way. Right and wrong look the same.

you

Check it

You own what you send. Verify facts, numbers and names.

Better input → better output. That is most of today.

[04] // safe use

Safe use first.

Before you paste, check the colour.

green · go

Public or harmless

Published information, generic text, your own writing with no names or numbers.

Any approved AI tool.

amber · check

Internal, not sensitive

Internal procedures, anonymised or summary data, drafts for internal use.

Only company-approved tools, with a work account.

red · stop

Personal or confidential

Names with IC numbers, salaries, health or customer data, contracts, unreleased financials, passwords.

Never, unless a specific system is approved for it.

Personal data is still personal data in a chatbot.

What the law expects

- Use personal data only for the purpose it was collected for
- Keep it secure, including from tools you send it to
- Think twice before it leaves Malaysia
- Amended in 2024: breach notification, data protection officers, higher penalties

What that means for you

- Remove names, IC numbers, phone numbers and emails first
- Use made-up or anonymised examples
- Use only the AI tools your organisation approves
- Unsure? Treat it as red and ask

[05] // prompting

Brief it like a new colleague.

Goal. Context. Material. Format. Check.

1

Goal

What you want and who it is for.

2

Context

Your role, the situation, what matters.

3

Material

The text, notes or data to work from (traffic light!).

4

Format

Length, tone, structure, language.

5

Check

Ask it to flag gaps, assumptions or questions first.

You won't need all five every time. Missing context is the most common reason for a weak answer.

Same task.
Very different answer.

Weak

"Write an email about the delay."

Generic, wrong tone, invents reasons, needs a full rewrite.

Strong

"Write a short, apologetic email to a long-standing customer (goal). Their order is 5 days late because a supplier shipment was held at port (context). Key facts: new date 28 Nov, free delivery on this order (material). Under 120 words, warm but professional, in English (format). Ask me if anything is unclear before writing (check)."

[05] // keep going

The first answer is a first draft.

refine

"Shorter."

"Half the length, keep the three key points."

tone

"Warmer."

"More formal, for a government client."

shape

"As a table."

"Columns: issue, owner, due date."

language

"In BM."

"Translate to Bahasa Melayu, formal register."

critic

"What's missing?"

"What would a sceptical CFO ask?"

[06] // hands-on

Your turn.

Everyday tasks. Pick two.

A

The email

Reply to a difficult email (made-up or anonymised). Workbook, exercise 1.

B

The summary

Summarise a long public document into 5 bullets for your manager.

C

The meeting

Turn rough notes into minutes with actions, owners and dates.

D

The rewrite

Make a dense paragraph clear for someone outside your team.

Use the 5-part brief. Write down your best prompt in the workbook. Traffic light applies.

Your role.
One real task.

finance

Variance commentary

Draft commentary from a summary table (no client names).

HR

Job description

Draft a JD and interview questions from a short brief.

operations

SOP

Turn a process description into a step-by-step SOP.

sales

Proposal outline

Outline a proposal from public information on a prospect.

managers

Decision memo

Lay out options, risks and a recommendation.

Tailor these to the client's teams. Pre-survey answers tell you which roles are in the room.

[07] // checking

Check before you send.

Your name is on it. Not the AI's.

Before it goes out

- Facts: true? From a source you trust?
- Numbers: recalculated, not copied
- Names, dates, titles: correct?
- Tone: right for this reader?
- Data: nothing red in it?
- Would you sign it without the AI?

Where it goes wrong

- Made-up facts, references and quotes
- Out-of-date information
- Biased or one-sided framing
- Confident tone hiding uncertainty
- Sensitive data pasted into the wrong tool

[08] // make it stick

Make it stick.

Where should your team use AI first?

quick wins

high value · easy · Start this week.

projects

high value · harder · Plan properly. May need a build.

nice to have

low value · easy · Let people try.

park

low value · harder · Not now.

{{CLIENT_NAME}} AI rules, on one slide.

- Approved tools: {{APPROVED_AI_TOOLS}}. Use a work account
- Traffic light: red data never goes into AI tools without approval
- A person checks every output before it is used or sent
- Say when AI wrote most of something that goes outside
- No AI for final decisions about people (hiring, performance, credit)
- Questions or mistakes: tell {{AI_POLICY_OWNER}}. No blame for reporting

[08] // commitments

One task.
This week.

write

Your task

One real task you will use AI for this week. Write it in the workbook.

share

Your best prompt

Post it to the team's prompt library or channel.

check

Your habit

The 6-point check, every time.

datawazi_

[--] // thank you

Use it well.
Use it safely.
Keep the human in charge.

You'll receive: the workbook, the prompt playbook and the AI usage policy.
