{{CLIENT_NAME}} AI usage policy

Version: {{VERSION}} · **Approved by:** {{APPROVER_NAME, ROLE}} · **Effective:** {{DATE}} · **Review:** every 6 months, next {{REVIEW_DATE}} · **Owner:** {{AI_POLICY_OWNER}}

1. Purpose

AI tools can save time and improve our work. This policy explains how everyone at {{CLIENT_NAME}} can use them **well and safely**: protecting personal data, confidential information, our customers and our reputation.

2. Who and what it covers

- **Everyone** who works for or with {{CLIENT_NAME}}: staff, contractors, interns and vendors working on our behalf.
- **All generative AI tools** that create text, images, code, audio or analysis, including chatbots, assistants built into other software (e.g. email, office or meeting tools) and browser extensions.

3. Approved tools

Tool	Approved for	Account	Notes
{{TOOL_1}}	{{e.g. green and amber information}}	Work account only	{{e.g. data not used for training under our agreement}}
{{TOOL_2}}	{{e.g. green information only}}	{{}}	{{}}

- Use **only** the tools listed here for work. Personal accounts and free tools are not approved for work information.
- To request a new tool, contact {{AI_POLICY_OWNER}}. IT and the data protection contact review it for security, data location and terms before approval.

4. What information can go into AI tools: the traffic light

Colour	Information	Rule
GREEN · go	Public or harmless: published information,	Any approved tool

Colour	Information	Rule
	generic text, your own writing with no names or figures	
AMBER · check	Internal, not sensitive: internal procedures, anonymised or summary data, internal drafts	Approved tools with a work account only
RED · stop	Personal data (names with IC/passport numbers, contact details, salaries, health, biometric, financial or customer records), confidential business information (contracts, unreleased financials, tender documents, legal advice), security information (passwords, keys, system details)	**Not allowed**, unless a specific system has been approved in writing for that data

When unsure, treat it as RED and ask. Removing names and identifiers can turn RED information into AMBER.

5. Using AI output

1. **A person checks everything** before it is used, sent or published: facts, numbers, names, dates, tone and data.
2. **You are accountable** for anything you send or decide, whether or not AI helped.
3. **Be open about it.** Say when AI generated most of a document, image or message that goes outside {{CLIENT_NAME}}. {{Adjust: e.g. internal disclosure not required.}}

4. **Respect others' rights.** Don't use AI to copy or imitate someone else's work, brand, voice or likeness.
5. **Keep records** of AI-assisted work as you would any other work. Prompts containing AMBER information are stored only in approved tools.

6. Not allowed

- Entering RED information into any tool not approved for it
- Using AI to make or fully automate **decisions about people**: hiring, performance, discipline, credit, eligibility or access to services
- Presenting AI output as verified fact without checking it
- Creating misleading, discriminatory, harassing or unlawful content
- Getting around security controls, or using AI tools to access systems or data you are not authorised to see
- Connecting AI tools (plug-ins, extensions, integrations) to company systems or data without IT approval

7. Building AI into systems or services

AI features in our products, services or internal systems (e.g. chatbots for customers, assistants on internal documents) need a short assessment **before launch**: purpose, data used, where data is processed and stored, accuracy testing, human oversight, how users are told, and who monitors it. Approval: {{APPROVER}}.

8. Personal data and PDPA

- Personal data is used only for the purpose it was collected for, and kept secure, including when an AI tool processes it.
- Transfers of personal data outside Malaysia follow {{CLIENT_NAME}}'s data protection policy.
- Suspected exposure of personal data through an AI tool is a **data incident**: report it immediately (section 9).

9. Reporting mistakes and incidents

If you think information was shared wrongly, or AI output caused a problem, tell {{AI_POLICY_OWNER}} at {{CONTACT}} **the same day**. Early reporting limits harm. **Reporting a mistake in good faith is never blamed.**

10. Training and support

- Everyone using AI tools for work completes the AI at work session (or an equivalent) within {{N}} days of starting.

- The prompt playbook and the latest version of this policy are at {{LOCATION}}.
- Questions: {{AI_POLICY_OWNER}}.

11. Breaches of this policy

Breaches are handled under {{CLIENT_NAME}}'s existing code of conduct and disciplinary procedures, proportionate to the harm and intent.

12. Review

{{AI_POLICY_OWNER}} reviews this policy every six months, and sooner when tools, laws or our use of AI change significantly.

Acknowledgement: I have read and understood the {{CLIENT_NAME}} AI usage policy.
