AI at work: participant workbook

{{CLIENT_NAME}} · {{DATE}} · facilitated by datawazi

Name: _____ Team / role: _____

Before you start

- **Approved AI tool(s) today:** {{APPROVED_AI_TOOLS}}
- **Your AI rules contact:** {{AI_POLICY_OWNER}}
- **The traffic light**, before you paste anything:

Colour	What it is	Examples	Where it can go
GREEN · go	Public or harmless	Published information, generic text, your own writing with no names or numbers	Any approved AI tool
AMBER · check	Internal, not sensitive	Internal procedures, anonymised or summary data, internal drafts	Company-approved tools only, with a work account
RED · stop	Personal or confidential	Names with IC numbers, salaries, health or customer data, contracts, unreleased financials, passwords	Never, unless a specific system is approved for it

Unsure? Treat it as red and ask. Removing names and identifiers can turn red into amber.

The 5-part brief

Brief the AI like a capable new colleague on their first day.

	Part	Ask yourself	Example
1	**Goal**	What do I want, and who is it for?	"Write a short reply to a customer…"
2	**Context**	What does it need to know about me and the situation?	"…a long-standing customer whose order is 5 days late…"
3	**Material**	What should it work from? (traffic light!)	"Key facts: new date 28 Nov, free delivery on this order."
4	**Format**	Length, tone, structure, language?	"Under 120 words, warm but professional."
5	**Check**	Should it ask questions or flag gaps first?	"Ask me if anything is unclear before writing."

Follow-up moves: "Shorter." · "More formal." · "As a table with columns…" · "In Bahasa Melayu, formal register." · "What's missing?" · "What would a sceptical reader ask?"

Exercise 1: everyday tasks (30 min)

Pick **two**. Use made-up or anonymised material only.

- **A. The email:** reply to a difficult email.
- **B. The summary:** summarise a long public document into 5 bullets for your manager.
- **C. The meeting:** turn rough notes into minutes with actions, owners and dates.
- **D. The rewrite:** make a dense paragraph clear for someone outside your team.

Task: _____ My first prompt:

What I changed, and my best prompt:

Score the result (1–5): quality ___ time saved ___ would I use it for real? ___

Exercise 2: your role (30 min)

Choose one real task from your job, using safe (green or amber) material.

Team	Example task
Finance	Draft variance commentary from a summary table (no client names)
HR	Draft a job description and interview questions from a short brief
Operations	Turn a process description into a step-by-step SOP
Sales	Outline a proposal from public information on a prospect
Managers	Write a decision memo: options, risks and a recommendation

My task: ______

My best prompt:

What the AI got wrong, and how I spotted it:

The 6-point check (before anything goes out)

- ☐ **Facts:** true, and from a source I trust?
- ☐ **Numbers:** recalculated myself, not copied?
- ☐ **Names, dates, titles:** correct?
- ☐ **Tone:** right for this reader?
- ☐ **Data:** nothing red in it?
- ☐ **Would I sign it** without the AI?

Exercise 3: use-case shortlist (in groups, 15 min)

List five tasks your team does often. Score each from 1 (low) to 5 (high).

#	Task	Value (time saved, quality)	Ease (safe data, simple)	Quadrant
1				
2				
3				
4				
5				

Quadrants: high value + easy = **quick win** (start this week) · high value + harder = **project** (plan it) · low value + easy = **nice to have** · low value + harder = **park**.

My commitment

One task I will use AI for this week:

The prompt I'll share with my team:

Questions after the workshop: {{AI_POLICY_OWNER}} · *Facilitator:* datawazi · hello@datawazi.com · datawazi.com
