[05] // what we build · custom tools & internal platforms

Built for your process. Not the other way round._

When no product fits and a spreadsheet has become a system, we build the internal tool your team keeps asking for.

sound familiar?

> **"We run the operation on a 40-tab spreadsheet."**

> **"Off-the-shelf software almost fits."**

> **"The same data is keyed in three times."**

what we do

+ Work through the process with the people who use it
+ Wireframe before writing code
+ Build in short sprints with weekly demos
+ Connect to your existing systems and data
+ Secure access, audit trail and backups

what you get

✓ A working tool hosted in your environment
✓ Source code and accounts you own
✓ User and admin guides
✓ Training for users and the system owner
✓ Optional support after go-live

how it runs

01 workshop	02 wireframe	03 build	04 launch
process, users	agree screens	weekly demos	UAT, training

Usually 4–12 weeks. Weekly demos, docs and training are standard.

a good fit if

→ A spreadsheet has become a system
→ No product fits how you work
→ Several teams key in the same data

works with

Low-code (Power Apps, AppSheet, Retool) or a custom web app, chosen for who will maintain it.

Vendor-neutral: we recommend what fits, not what we resell. PDPA designed in from kickoff.

Start with a free 30-minute fit check.

Pricing is scoped after the fit check, in writing, before any work starts.
