Security & data protection at datawazi

datawazi · data & AI solutions · Malaysia · hello@datawazi.com

We build systems that touch our clients' most important data. This page explains how we protect it.

How we handle your data

- **Your environment, your ownership.** We build in **your own cloud accounts and systems** wherever possible. Code, data, dashboards and documentation belong to you.
- **Least access.** We ask for the minimum access the project needs, read-only where possible, with a **named account for each person**. No shared logins.
- **Agreements first.** We sign an **NDA** before discovery, and a **Data Processing Agreement** before touching personal data. A **PDPA checklist** is completed together at kickoff.
- **Personal data minimised.** We prefer aggregated or anonymised data, and mask personal fields in development and test environments.
- **Data stays where you need it.** Storage location is agreed upfront. No transfer outside Malaysia without your written approval.
- **AI used responsibly.** Your personal or confidential data is never entered into AI tools without your written approval, and only in business tools that don't train on your data.
- **Clean exit.** At the end of the engagement we delete any of your data we hold, ask you to remove our access, and confirm both in writing.

How we protect our own systems

- Password manager and **multi-factor authentication** on all business accounts
- **Encrypted devices** with automatic updates and screen locks
- Business email and approved tools only; no client data in chat apps or personal storage
- Private code repositories; no passwords or keys in code
- Everyone working on your project signs a confidentiality agreement

If something goes wrong

We have a written incident response plan. If an incident may affect your data, **we notify you within 24 hours** and give you the information you need to meet your own obligations under the PDPA, including notifying the Commissioner where required.

Standards we follow

- Malaysia's **Personal Data Protection Act 2010** and its **2024 amendments**
- Your own IT and security policies, which we follow on your systems
- A written information security and data protection policy, reviewed every year

Questions, or a security questionnaire to complete? Email hello@datawazi.com. We're happy to go through your requirements.
