Data & AI readiness audit: plan

Client: {{CLIENT_NAME}} · **Sponsor:** {{SPONSOR_NAME}}, {{SPONSOR_ROLE}} · **Dates:** {{START_DATE}} – {{END_DATE}} · **Datawazi lead:** {{DW_LEAD}}

What this audit answers

1. Where does your data live today, and how much can you trust it?
2. Which problems are worth solving first, and what will they change?
3. What should you build, fix or leave alone, and in what order?

What you get

- **Readiness report**: findings across systems, data quality, people, process, security and PDPA.
- **Prioritised roadmap**: 3–6 initiatives, each with its business outcome, effort, dependencies and a suggested order.
- **Readout session**: 60–90 minutes with your sponsor and key people.

Plan: 2 weeks

When	Activity	Who we need
Day 1	Kickoff (45 min): goals, success measures, access	Sponsor + IT contact
Days 1–3	Interviews (45 min each, 4–8 people)	Report owners, users, IT, finance
Days 2–5	Systems & data review: walk-through of each source	IT / system owners
Days 4–7	Data sampling & quality checks, read-only	Read-only access or extracts
Days 6–8	Use-case scoring & architecture options	–
Day 9	Draft findings check-in (30 min)	Sponsor
Day 10	Readout & roadmap	Sponsor + stakeholders

Plan: 1 week (smaller organisations)

When	Activity
Day 1	Kickoff + 3–4 interviews
Days 2–3	Systems & data review, sampling
Day 4	Scoring and roadmap
Day 5	Readout

What we need from you

- ☐ A named contact who can book interviews and chase access
- ☐ Completed **Data Source Inventory** (`Data_Source_Inventory.xlsx`). We'll fill it in together if needed
- ☐ Examples of the reports or spreadsheets used today
- ☐ **Read-only** access or sample extracts. We don't need production write access
- ☐ Any existing IT, data or AI policies

How we treat your data

We work read-only, take the minimum sample needed, mask personal data where possible, and keep everything in {{AGREED_STORAGE}}. Samples are deleted at the end of the audit unless you ask us to keep them. See the PDPA checklist.

Interview guide (45 min)

1. Your role, and the decisions you make each week or month
2. The reports and data you rely on. Where do they come from?
3. What takes too long, breaks, or can't be trusted?
4. If you had a reliable answer to one question, what would it be?
5. Where could automation or AI help, and where should it stay out?
6. Anything sensitive we should know about: personal data, regulators, audits?
