Data & AI, built to work_

Who we are, what we do, who we do it for, and how we talk about it. Read this before you write, design or post anything for datawazi.

datawazi in one page.

what we are

A data & AI solutions consultancy based in Malaysia. We design, build and run the data and AI systems that help organisations work smarter.

30-second pitch

Most organisations already have the data they need. It's just stuck in spreadsheets, separate systems and people's heads, so reports take days and nobody trusts the numbers.

datawazi connects those systems, builds one reliable source of truth, and puts it to work through dashboards, automation and practical AI. We start from the business decision, not the technology, and every project ends with a team that can run it.

key facts

Name	datawazi, always lowercase (logo: **datawazi_**)
Type	Data & AI solutions consultancy
Based	Malaysia
Serves	Any organisation: SMEs to GLCs
Website	datawazi.com
Contact	hello@datawazi.com
First step	A free 30-minute fit check

We are

+ A builder of working data and AI systems
+ Business-first and plain-spoken
+ Vendor-neutral: we recommend what fits
+ PDPA-aware from day one
+ Built to hand over, with docs and training every time

We are not

- A marketing, social media or digital agency
- A software reseller or licence partner
- An "AI hype" shop: if AI isn't the answer, we say so
- IT support or hardware
- Staff augmentation only

datawazi_

The name joins **data** with **wazi**, a word with two meanings. Both are deliberate: together they're why datawazi chose the name. The trailing underscore is a blinking terminal cursor: the system is live, and the work keeps going.

meaning 1 · Swahili

wazi = clear, open

datawazi reads as "data made clear". That's the job: take messy data and make it clear enough to decide with.

meaning 2 · Malay

wazi ≈ wazir

To Malaysian ears it echoes *wazir* (minister, trusted adviser): a "data adviser". That's the role we play for clients.

THE STORY datawazi makes data clear, and acts as the trusted adviser who helps organisations decide with it. Use both meanings together; don't pick one.

How to write it

Context	Write	Never
Logo	datawazi_ (logo file only, never retyped)	DataWazi_, DATAWAZI_
Sentences	datawazi (always lowercase, even at the start of a sentence)	Datawazi, DataWazi, Data Wazi, DATAWAZI
Handles, URLs	datawazi	data_wazi, datawazi.my (we use .com)
Legal documents	the registered name, exactly as on the SSM certificate	an informal version

Any organisation, any sector.

We work with any business or organisation that has data and decisions to make. Never position us as serving one niche, and never as a marketing business.

Sector	What they typically say
SMEs	"Our numbers live in twelve spreadsheets."
Corporates	"Every department has its own version of revenue."
Public sector & GLCs	"Board reporting takes three weeks to pull together."
Non-profits	"Funders want impact data we can't easily produce."
Education	"Enrolment and finance data don't talk to each other."
Healthcare	"Patient data has to stay protected and in-country."
Startups	"We want AI in the product, not a science project."

Who we talk to

decision maker

CEO, MD, COO, CFO, head of department. Cares about time, cost, risk and trustworthy numbers.

day-to-day owner

Finance, operations or reporting lead who lives with the manual work today.

IT / data

IT manager or small data team. Cares about security, PDPA, fit with existing tools, and who supports it.

The problems we solve

Slow reporting. Month-end takes days of copy-paste.

No single truth. Different teams, different numbers.

AI pressure. Everyone wants AI; nobody knows for what.

Six things we build.
Three ways we help around them.

01 data platforms

A single source of truth, sized to the budget.

One governed place where business data lands, gets cleaned and is ready to use.

02 pipelines & integrations

Systems, talking to each other.

ERP, CRM, finance/HR, spreadsheets, APIs and files, moved automatically.

03 dashboards & analytics

Numbers people trust.

Reports and dashboards built on reconciled data, not exports.

04 workflow automation

Reports, approvals, hand-offs.

Removing the repetitive manual steps between people and systems.

05 custom tools

The tool the team keeps wishing for.

Internal apps, portals and trackers that replace fragile spreadsheets.

06 AI integration

AI that answers from your own documents.

Knowledge assistants, chatbots and AI features, grounded and safe.

Before and after the build

before · 1–2 weeks

Data & AI readiness audit

A paid review of systems, data and goals that ends in a prioritised roadmap. The usual starting point.

alongside

AI adoption & training

Workshops, team playbooks and an AI usage policy, so people use AI well and safely.

after go-live

Managed support

A monthly retainer: monitoring, fixes, small changes and improvements.

Eleven steps.
Five phases.
No surprises.

fit	discover	build	launch	run
01 Intake	03 Discovery & audit	05 Kickoff & access	09 Handover & training	11 Run & grow
02 Fit check	04 Proposal & SOW	06 Solution design	10 Hypercare	↻ next phase → 03
		07 Weekly sprints & demos		
		08 Test & UAT		

What a client experiences

- A **free 30-minute fit check** to start. A straight answer, even if we're not the right fit (we refer them on).
- A **paid readiness audit** when the path isn't clear. Small, clear requests go straight to a proposal.
- **Weekly demos** of working software, not status reports.
- **Every number reconciled** against their source systems before sign-off.
- **Docs, training and 2–4 weeks of hypercare** after go-live.

Phrases to use

"Start with a 30-minute fit check."

"A demo every week."

"Every number ties back to your source systems."

"Built to hand over."

Five rules.
Every project.

#	Principle	What it means	Proof we can point to
01	Business first	Decisions before technology. We start from the problem and the decision it serves.	Intake starts with "what problem, why now, what does success look like"
02	Practical, not hype	Working systems and honest scoping. If AI isn't the answer, we say so.	Free fit check; we refer out when we're not the fit
03	Built to hand over	Documentation and training in every project. The client can run it without us.	Handover pack + training + hypercare in every SOW
04	Vendor-neutral	We recommend what fits the team, budget and existing tools. We don't resell licences.	Microsoft, Google, AWS, open-source: whatever fits
05	PDPA-aware	Malaysia's Personal Data Protection Act is designed in from kickoff, including where data is stored.	PDPA checklist and data processing agreement at kickoff

Why choose us (key messages)

message 1

We build, not just advise.

Strategy that ends in working systems: platforms, pipelines, dashboards, automation and AI.

message 2

Sized to you.

From an SME's first dashboard to a GLC data platform. We right-size the solution and the budget.

message 3

Your team can run it.

Handover, docs and training are standard, so there's no lock-in. Ongoing support is optional.

message 4

Safe with your data.

PDPA-aware, read-only where possible, data kept where you need it.

Plain.
Specific.
Confident.

Voice rules

- **Lead with the business result**, then the tech.
- **Be specific:** "month-end in 1 day instead of 5" beats "faster reporting".
- **Short sentences.** Lean copy online; detail belongs in the fit-check conversation and the deck.
- **Headlines break after each comma or full stop.** ("The data exists. / Straight answers don't.")
- **Our name is always lowercase:** "datawazi is…", even at the start of a sentence.
- **British / Malaysian spelling:** organisation, optimise, colour. Currency: RM.
- **Lowercase terminal labels** introduce sections: [03] // what we build

Words

Use	Avoid
build, connect, automate	revolutionise, disrupt
one source of truth	synergy, leverage
practical AI	AI-powered everything
work smarter	unlock, supercharge
hand over, train	cutting-edge, next-gen
fit check	free consultation (sounds salesy)

Boilerplate (copy as is)

Short (≈20 words): datawazi is a Malaysian data and AI solutions consultancy. We design, build and run the systems that help organisations work smarter.

Long (≈70 words): datawazi is a data and AI solutions consultancy based in Malaysia. We help organisations of every kind, from SMEs to public sector and GLCs, turn scattered data into systems that work: data platforms, pipelines and integrations, dashboards, workflow automation, custom tools and practical AI. We start from the business decision, stay vendor-neutral, design for PDPA from day one, and hand every project over with documentation and training. Start with a free 30-minute fit check at datawazi.com.

Tech, modern, clean and bold.

Ink
#0A0C0F · main background

Paper
#EEF0EA · text on dark, light pages

Lime
#C8FF2E · accent, ≤3% of a layout

Cobalt
#4D6BFF · charts only

Type

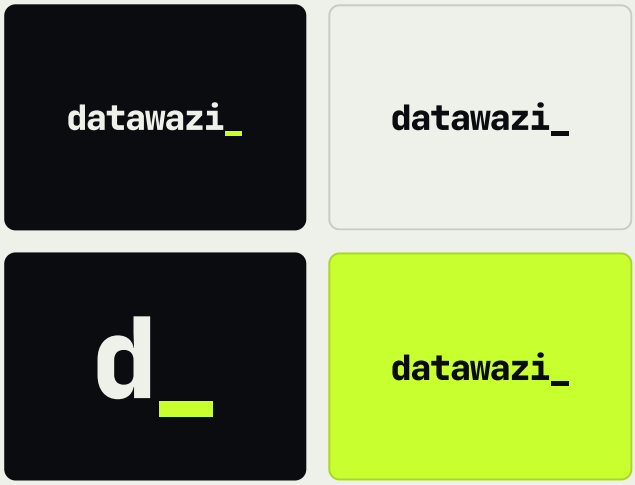

Obel Mono for everything: headlines (ExtraBold), subheads (Bold), body (Regular). Free licence, so install it from the brand folder.

Logo exception: the **datawazi_** wordmark is drawn in JetBrains Mono ExtraBold. Always use the logo files; never retype it.

Graphic style

- Terminal labels: [03] // section
- Subtle grid backgrounds
- Hairline borders, small radius, no soft shadows or gradients
- Lime text only on dark; on light, lime is a highlight block
- No robots, glowing brains or stock "AI" imagery

Logo

- Underscore is lime on dark, ink on light and lime backgrounds.
- Use the **d_** mark for profile pictures; the full wordmark for posts and covers.
- Clear space: one letter width all round. Never stretch, recolour or put it on cobalt.

Before you publish.

Must

+ **No prices, rates or payment terms** in any public material. Say "scoped after a fit check".
+ **No client names, logos, quotes or results** without written client approval.
+ **Mark example figures as examples.** Don't present them as real results.
+ **PDPA in marketing:** only email people who opted in, include an unsubscribe, and keep lists out of personal drives.
+ **Every call to action points to the fit check:** datawazi.com or hello@datawazi.com.

Never

- Call us a marketing, social media or digital agency.
- Promise AI that "replaces your team".
- Name a single vendor as "our platform". We're vendor-neutral.
- Capitalise the name: it's datawazi, never Datawazi.
- Retype or redraw the logo.
